March 2013

Introduction
The Repository as a Service Bibliography includes selected English-language journal articles, conference papers and technical reports that are useful in understanding the concept of repository as a service in academic and research institutions.

In “Institutional Repositories: Essential Infrastructure For Scholarship In The Digital Age”, Lynch (2003) describes institutional repository as “a set of services that a university offers to the members of its community for the management and dissemination of digital materials created by the institution and its community members.” The concept of “Repository as a Service” is still evolving; the notion of it was first introduced by Lewis et al. (2011) and their paper “Repository as a Service (RaaS)” looked at the characteristics of the systems provided “as a Service”.

This bibliography covers the subjects of institutional repositories (IR), staffing, repository software, open access, interoperability, and subject librarian roles in IR. This bibliography does not cover digital media works (such as MP3 files), editorials, e-mail messages, interviews, letters to the editor, presentation slides or transcripts, or weblog postings. Coverage of conference papers and technical reports is very selective.

Most sources have been published from 2001 through 2013. The bibliography includes links to freely available versions of included works where possible.

The bibliography is available under a Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.
