ABSTRACT

Complexes of tetravalent uranium and thorium have been prepared with the tetradentate ligands N,N'-ethylenebis(salicylaldimine), N,N'-o-phenylenebis(salicylaldimine) and the analogous ligands containing substituent groups in the salicylaldimine benzene rings (i.e. 3-MeO, 3-EtO, 5-Cl, 5-NO₂). Attempts to form bidentate salicylaldimine complexes were impeded by hydrolysis and oxidation; however, the metal complexes with N-Mesalicylaldimine, N-Etsalicylaldimine and N-phenylsalicylaldimine have been isolated. X-ray powder patterns for these complexes are reported.

X-ray structural studies have revealed the salicylaldehyde, N-Mesalicylaldimine, N-Etsalicylaldimine and N,N'-o-phenylenebis(salicylaldimine) complexes of thorium to be eight co-ordinate, with the salicylaldimine complexes having distorted square antiprismatic co-ordination and the salicylaldehyde complex displaying a dodecahedral configuration. U.V., visible and near-I.R. spectra of Schiff-base complexes of thorium, uranium, thallium and lithium are also reported and discussed.
CONTENTS

Chapter

1. INTRODUCTION
   1. The Actinide Elements 1
   2. Octaco-ordination 5
   3. Chelate Complexes 16
   4. Schiff Base Complexes 26
   5. Research Envisaged 39

2. PREPARATIVE WORK
   A. Uncomplexed Ligands
      1. Preparation of Non-Substituted Ligands 41
      2. Preparation of the Substituted Quadridentate Ligands 44
      3. Infra-red Spectra 45
   B. The Quadridentate Complexes
      1. Non-substituted Systems 46
      2. Substituted Quadridentate Complexes 48
   C. The Bidentate Complexes
      1. Initial Attempts at Preparation 52
      2. Preparation via the Metal Acetates 53
      3. Preparation via the Salicylaldehyde Complexes 55
      4. Preparation via the Melt Method 56
      5. Thallium-Schiff Base Complexes 59
      6. Sodium and Lithium Salts of the Schiff Bases 61
      7. Preparation via Metal Alkoxides 62
      8. Drying of Chemicals and Solvents 62
      9. Instrumentation 63

### Chapter 7

**ELECTRONIC ABSORPTION SPECTRA OF AN(IV)-SCHIFF BASE COMPLEXES**

#### A. INTRODUCTION

1. Spectral Features Associated with Complexes of the Actinide Elements  
   1.1 $5f \rightarrow 5f$ Transitions  
   1.2 $f \rightarrow d$ Transitions  
   1.3 Electron Transfer Transitions

2. Electronic Transitions Within the Ligand Moieties

#### B. EXPERIMENTAL

1. Instrumentation and Sample Preparation
2. Uncomplexed Ligands and their Lithium Salts
3. Quadridentate Actinide Complexes
4. Bidentate Actinide Complexes
5. Thallium Complexes

#### C. DISCUSSION OF RESULTS

1. U.V. and Visible Spectra
2. Visible and Near I.R. Spectra

**TABLES FOR CHAPTER SEVEN**

**FIGURES FOR CHAPTER SEVEN**

#### 8. DISCUSSION

Page numbers are indicated for each section.
