## ABSTRACT

Emotional child abuse is recognised as the unifying construct of child abuse (Brassard & Gelardo, 1987). Defining emotional child abuse (ECA) is an area of debate in the literature and a widely recognised definition has yet to be developed. There is general agreement on the definition of resilience with most making reference to adapting and coping well in the face of adversity. Recent research has questioned the implied unidimensionality of the term. A research study was designed with several aims: to explore how ECA is defined by professionals working in the area of child abuse, and by members of the general public; to develop an understanding of the nature of ECA from adults who self-identified as having experienced ECA; and, to examine the ways in which these adults coped, and dealt with ECA and its effects. Further aims of the research following from these were to develop a definition of ECA, and to identify implications for practice for those working in the area of ECA. Attachment theory (Bowlby, 1969, 1988; Crittenden & Ainsworth, 1989) was the theoretical base for the research.

The literature on resilience was reviewed with a particular focus on ECA. Consistent findings in the literature on the cost of resiliency in the area of emotional well-being and functioning were explored and used to critically examine the clinical utility of the term.

Two surveys were developed, one for distribution to all the professionals working in the area of child abuse in statutory agencies in Auckland; and one for distribution to a sample of adults living in the greater Auckland area. Comparison of the conceptual and specific categories derived from the definitions of ECA provided by the professional group (N=181) and the lay group (N=142) indicated considerable agreement. Differences between the groups on the relative frequency of use of the categories were explained and directions for future research were suggested. Concurrence between the findings of this study and

others on developing a definition of ECA supported the existence of ECA as a separate and consistent form of child maltreatment.

Adults who saw themselves as having experienced ECA were identified through the general public and professional surveys (N=30). They were individually interviewed using a semi-structured format about the nature of the ECA they had experienced and how they had coped with it as a child, adolescent, and adult. The interviews, and relevant material from the surveys, were analysed using a Grounded Theory approach. The themes that emerged from the material on the nature of ECA were grouped into four areas: the nature of ECA; the effects of ECA; the context of ECA; and, disclosure of ECA. The themes that emerged on how participants coped and dealt with the ECA they had experienced revealed a range of coping strategies and changes in these across the broad developmental stages of childhood, adolescence, and adulthood. An important distinction that emerged was that between coping with the ECA and dealing with it. The cost of coping was a prominent theme and concurred with findings in the literature.

The implications for practice and directions for future research generated by these findings are discussed. A theoretical definition developed from the research findings is presented and applied to specific examples from the research.

## ACKNOWLEDGEMENTS

This thesis would not have been possible without the people who participated in the research. My thanks to them and particularly to those who gave of themselves and their personal experience in the interviews - my heartfelt thanks for all that you gave. The excellent support and advice of my supervisors, Dr Jan Pryor and Dr Fiona Cram has been crucial to this work. My sincere thanks and gratitude to them for their time, wisdom, humour, and encouragement.

The three year scholarship from the Health Research Council was essential to the completion of this work and many thanks are due to them. Funding from the Oakley Mental Health Research Foundation and the University of Auckland Research Grants Committee facilitated the research and is much appreciated.

Many thanks are due to my friends and colleagues. In particular to my good friends Alison Towns, Christine Herzog, Kate Paulin, Carol Hutson, and Ian Lambie for their unfailing support and encouragement. To my Qualitative Research Colleagues (QRC), Tim McCreanor, Kate Paulin, Janina Adamiak, Sylvia Blood, Ian Lambie, and Niki Harre, my appreciation and thanks for their support, encouragement, lively discussions, constructive criticisms, and wonderful humour.

A special thanks to David Seedhouse for his unfailing confidence in my ability to develop a theoretical definition and his constructive criticism and encouragement. Grateful thanks also Margaretanne Rogers and Rosemary Graham for their assistance.

To my family for all their love, support, and confidence in me I extend my deepest gratitude. Finally and most of all, to Denise for everything - there will never be enough thanks.

Sticks and stones may break my bones but  
names will (n)ever hurt me.

<b>Introduction</b>		<b>1</b>
<b>Chapter One</b>	<b>Emotional child abuse: Developing an Aotearoa/New Zealand research study</b>	<b>4</b>
	A conceptualisation of emotional child abuse	6
	Terminology	8
	Issues relevant to the definition of emotional child abuse	10
	Emotional child abuse and the role of statutory systems	19
	Investigating emotional child abuse in Aotearoa/New Zealand	22
	Summary	29
<b>Chapter Two</b>	<b>A review of the literature on resiliency in relation to emotional child abuse</b>	<b>30</b>
	1. Terminology and definitions in the research of resiliency	31
	2. Models of resiliency	43
	3. Resiliency in relation to child maltreatment	57
	Child maltreatment: A review of the literature on protective factors	59
	A. Attributes of the child	60
	B. Factors within the family	77
	C. Factors within the environment	81
	The cost of resiliency	83

<b>Chapter Three</b>	<b>How emotional child abuse is defined by members of the general public and professionals in the field of child abuse</b>	88
	Method	89
	Results	103
	Discussion	114
<b>Chapter Four</b>	<b>Coping with emotional child abuse: An Aotearoa/New Zealand study of adults abused as children</b>	<b>121</b>
	The nature, effects, and context of emotional child abuse	124
	Disclosure of abuse and implications for practice	144
	Aspects of resilience in adults emotionally abused as children	150
	I: Attributes of the child	151
	II: Factors within the family	170
	The cost of resiliency	172
<b>Chapter Five</b>	<b>Conclusions</b>	<b>176</b>
	Limitations of the research	177
	Central constructs arising from the research findings	177
	A theoretical definition of emotional maltreatment	180
	Clinical implications of the findings	194
	Future directions for research	204
