ACKNOWLEDGEMENTS

The writing of this acknowledgement note has brought back to me memorable moments from over the years of my study. During the whole process, I was, indeed, very fortunate to have enormous support and encouragement from a number of people and organisations. I would like to express my deep gratitude to them.

I feel greatly indebted to a number of people: my supervisors at different stages of my study: Prof. Nigel Haworth, Prof. Fredric Deyo, and Assoc. Prof. Kenneth Jackson, my academic advisors Prof. Paul Clark and Dr. Valerie Lindsay. The inspiration, guidance, and invaluable advice from these people helped me overcome many difficulties, and were the critical factor in completing the study.

I am grateful to a number of institutions for their help in making this research possible. First, I would like to acknowledge Peking University for supporting my doctoral study while I was on the faculty for the first three years of the study, and the New Zealand Asia Institute, the University of Auckland, for my appointment as a Research Associate while pursuing the study. Special thanks have to be made to the Asia 2000 Foundation, New Zealand, and the Ryan Education Trust, for providing financial support for the fieldwork in China. I would like to thank the firms and government institutions both in New Zealand and China that participated in the study. Without their help and cooperation, this study would not have been possible.

The experience of PhD study is about learning. Over the whole period of study, I have benefited from both academic and personal education. Many people have been instrumental in this precious experience, often against considerable odds. In this regard, I would like to express my sincere thanks and appreciation for the help I received from Assoc. Prof. Christopher Tremewan, Assoc. Prof. Yongjin Zhang, Assoc. Prof. John Monin, Assoc. Prof. David Robb, Gwen Ryan, Dr. Tim Beal, Irene Y. Y. Fung, Cathy X. Cao, Marianne Hill, Christine Osborn, Assoc. Prof. Doren Chadee, Xingwai Na, Ben Hamblin, and Wen Xu.

Last but not least, I would like to express my deep gratitude to my family. During my lifetime, my parents Kang Chengwei and Luo Zhaoying have never failed to encourage me to learn to the best of my ability. My sister Kang Yafei, and my brothers Kang Minfei, Kang Renfei and Kang Jianfei are always there to offer help whenever I have difficulties. My deepest appreciation goes to my wife Hui Liu and our daughter Wendy W. Kang. For most of the period of my study, my wife has had to live separately from me and to bear all the hardship by her own, and she has shown invaluable understanding and patience.

ABSTRACT

This thesis examines the relationships between performance, evolution and network governance of international joint ventures from a dynamic perspective. This is accomplished with a two-stage examination of case studies on the China-New Zealand joint ventures in China, involving two case studies in the first stage and one case study in the second stage.

The exploratory and narrative research aims to aid theory building in the area of assessment and determination for IJV performance. In an investigation of the case IJVs between the Chinese and New Zealand firms, the study results in the development of three conceptual models of IJV performance and network relationships, namely, the Static Goal Model, the Goal Succession Model, and the Goal Emergence Model. These conceptual models adopt goal attainment as the criterion for assessing IJV performance, and address goal attainment from a dynamic perspective by using a network approach. The theoretical models are illustrated and supported by the empirical evidence from the longitudinal case studies. The conceptual models differ from existing models of IJV performance in a number of important aspects, and thus contribute to theory relating to IJV performance in the following ways.

These models integrate the concepts from the three research areas of performance, governance structure and dynamic evolution into a conceptual framework, addressing IJV performance. Two types (organisational and interpersonal) of IJV network relationships are identified, and complex multiple tiers of network relationships in each type and their influence on JV performance and evolution are discussed. The study highlights the influence of network relationships and their evolution on IJV performance by arguing that IJV performance hinges on whether a trend of institutionalising the mechanism of trust building and conflict resolution and of balancing the network relationships within the IJV arrangement emerges from the process of IJV dynamic evolution.

This research was solely undertaken by the author for the purpose of a thesis submitted in fulfilling the requirements for the degree of Ph. D at the University of Auckland.
