Running title: Calibration of DXA devices in young children

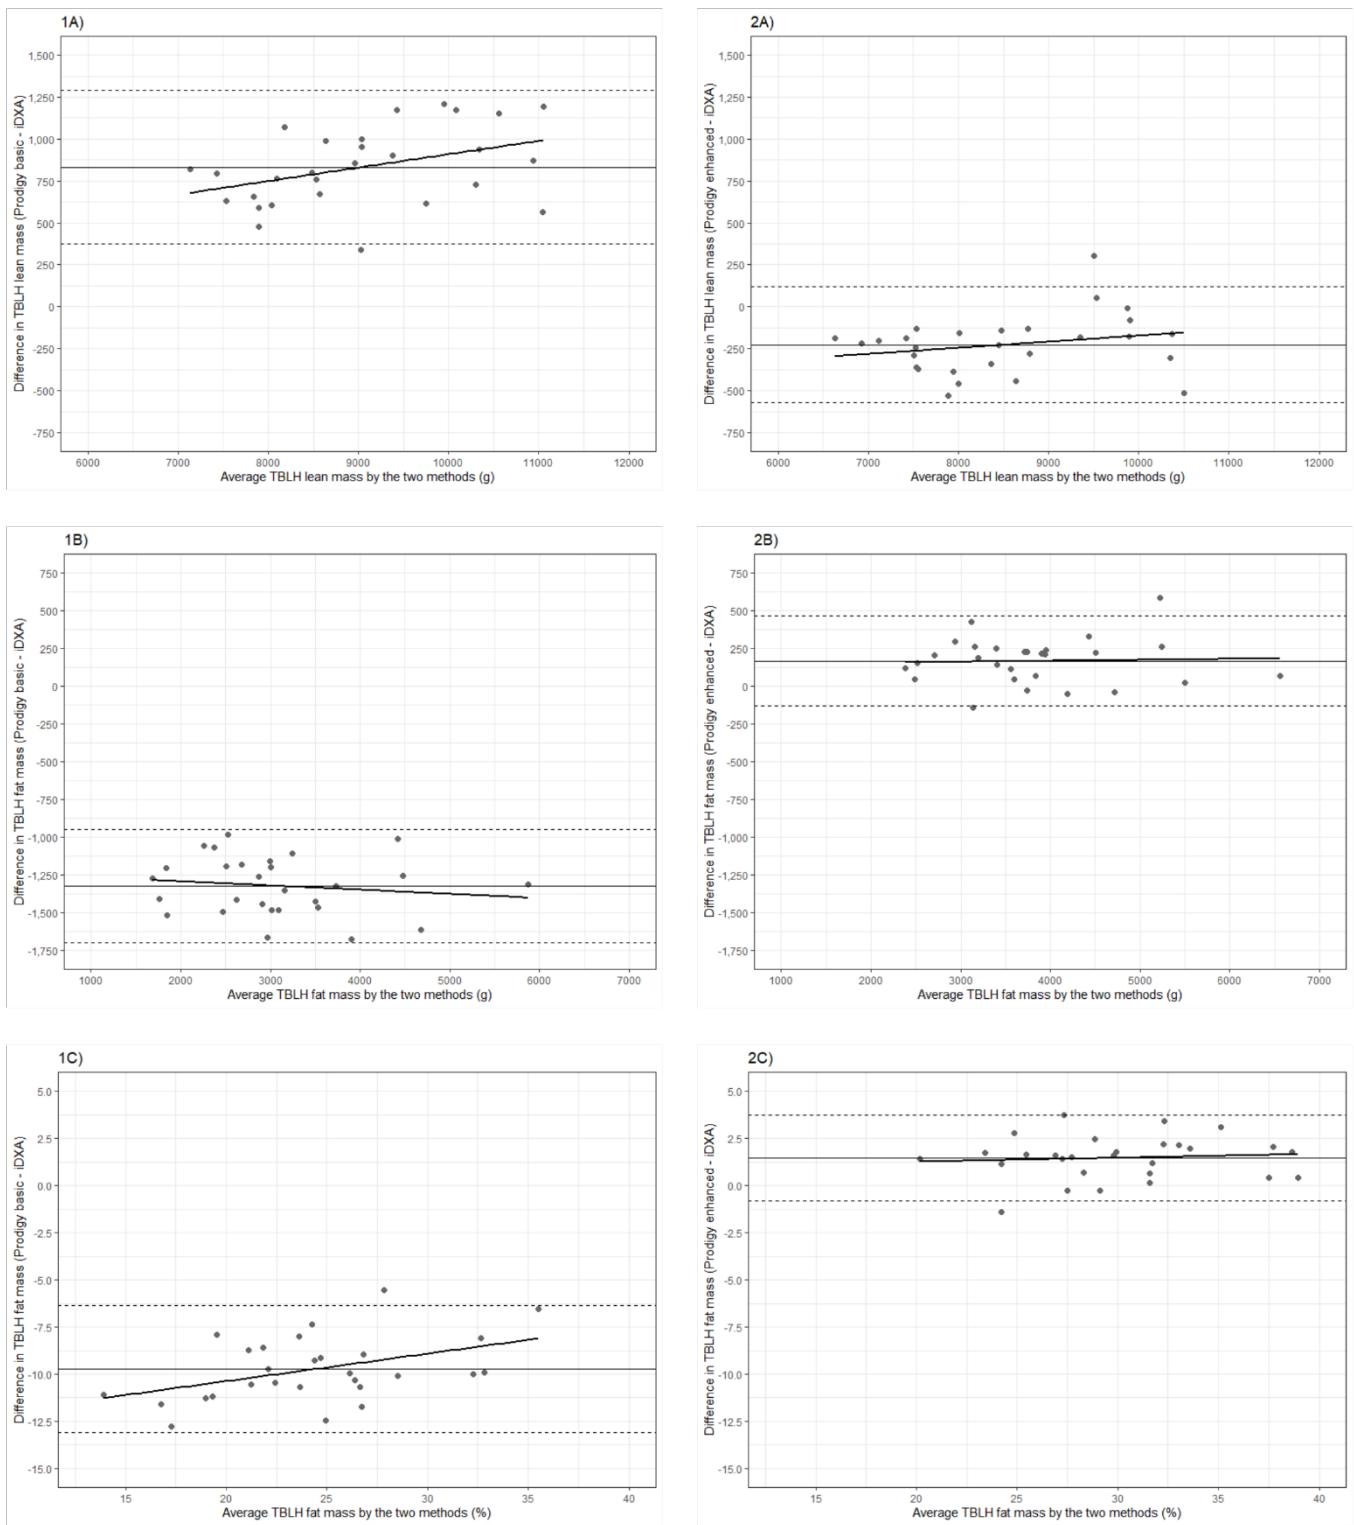

Competing interests: KMG, SYC, and WSC are part of an academic consortium that has received grants from Société Des Produits Nestlé S.A. outside the submitted work. SYC and KMG have received reimbursement for speaking at conferences sponsored by companies selling nutritional products. All other authors declare no competing interests.

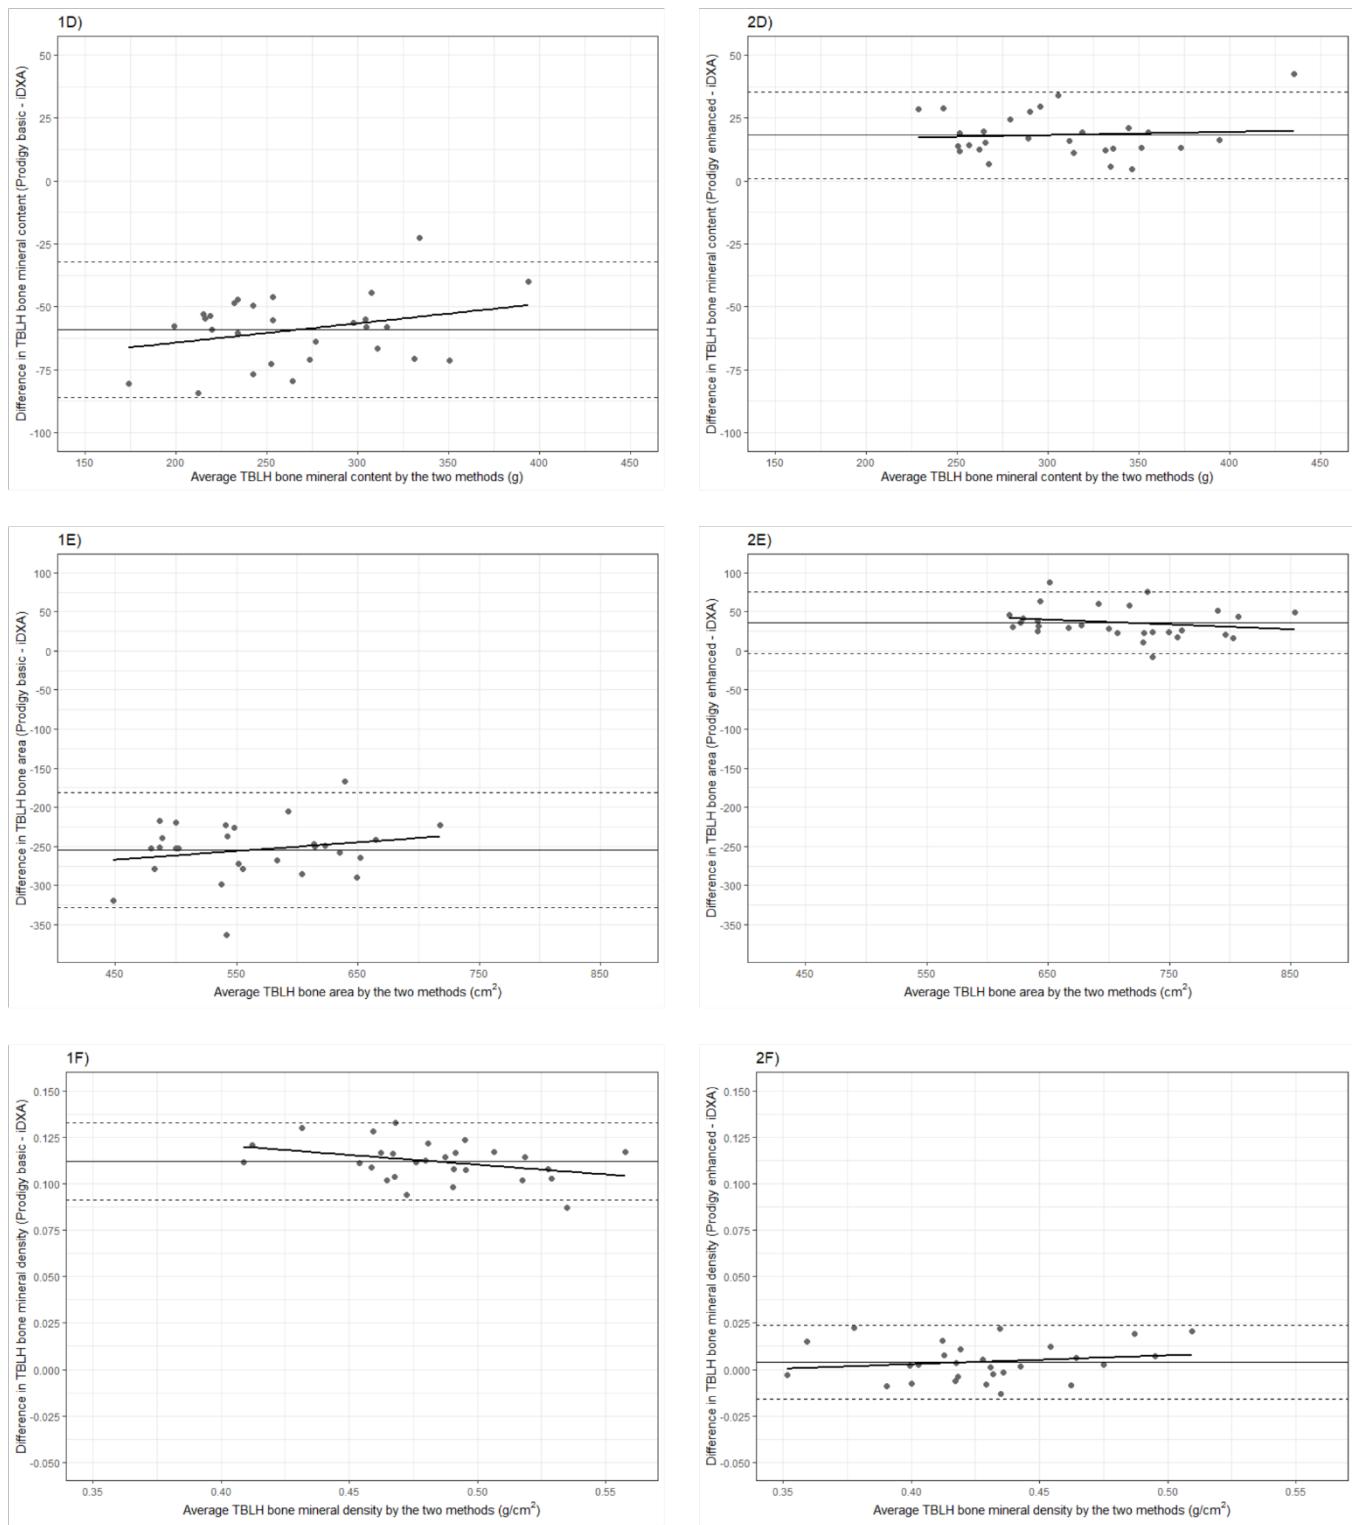

Supplementary Table 1 Regional body composition estimates and results from repeated measures analysis of variance and Bland–Altman analysis comparing body composition parameters of young children (n=28) measured using two dual-energy X-ray absorptiometry (DXA) devices analysed using different software versions: iDXA scan, Prodigy scan analysed with basic analysis; and Prodigy scan analysed with enhanced analysis.
